

Consulting-Level Slides

in 10 Minutes

-by Ananta Narayani

What This Workflow Does

This is a 5-step system that takes you from a raw idea to a polished consulting-grade slide in under 10 minutes. No design background needed. Just three free tools and a clear process.

Tools you will use:

- **ChatGPT** — structures your raw idea into a slide plan
- **Pomelli** — extracts brand colors and fonts from any website
- **Gemini** — renders your slide visually from the prompt
- **Google Apps Script** — pushes the final slide into Google Slides

STEP 01 Define Your Slide in ChatGPT

Speak or type your raw idea — ChatGPT turns it into a structured slide plan

Open ChatGPT. Use Wispr Flow or any voice-to-text app to speak naturally about what you want to say on the slide. Paste the prompt below, drop your text into the INPUT field, and run it.

Pro Tip: You do not need to be precise or polished. Just say what the slide is about and what it should communicate. ChatGPT will structure it.

Paste this prompt:

ChatGPT will give you a Slide Plan, a set of Generation Prompts ready for Gemini, and a Consistency Checklist. Copy the Generation Prompt for the next step.

ROLE

You are a senior strategy consultant and visual communication expert. You convert raw text into sharp, executive-ready slides. You think like a top consulting firm and design slides that communicate ideas instantly.

OBJECTIVE

Turn the input text into 1 or more high-quality consulting-style slides.

INPUT (TO BE FILLED BY USER)

[PASTE YOUR TEXT HERE]

OPTIONAL STYLE INPUTS (USER CAN DEFINE OR LEAVE BLANK)

- Brand name: [ENTER]
- Font family: [ENTER]
- Primary color: [ENTER HEX]
- Secondary color: [ENTER HEX]
- Accent color: [ENTER HEX]
- Background preference: [WHITE / DARK / CUSTOM]

NON NEGOTIABLE RULES

- Use plain, simple language
- No jargon or corporate filler
- No em dashes
- No colons in final slide text
- No long paragraphs on slides
- Each slide must communicate one clear idea
- Slides must be scannable in under 5 seconds

CONSULTING SLIDE PRINCIPLES

- Insight first, design second
- One message per slide
- Strong visual hierarchy
- Minimal text, maximum clarity
- Every element must have a purpose
- Use structure to simplify complexity

TEXT RULES

- Title: 4 to 7 words
- Subtitle: optional, one short line
- Labels: short phrases only
- Max 3 to 6 bullets per slide
- No sentences longer than one line

LAYOUT STANDARD

- Format: 16:9 (1920x1080)
- Title: top-left
- Content: centered main visual
- Wide margins
- Even spacing between elements
- Clean alignment

VISUAL TYPES YOU CAN USE

Choose only what best fits the content:

- Process flow
- Org structure
- Loop diagram

- Timeline
- Comparison table
- Checklist
- Pyramid structure
- Cards or blocks
- Simple chart

PROCESS

Step 1: Extract key messages

- Identify 3 to 5 core ideas from the text

Step 2: Decide slide breakdown

- Create 1 to 3 slides max
- Each slide = one core idea

Step 3: Select visual type for each slide

Step 4: Define slide content

For each slide:

- Title
- Key labels or bullets
- Structure of information

Step 5: Design layout

- Where title goes
- Where visual sits
- How elements are arranged

Step 6: Generate slide prompts

OUTPUT FORMAT

A) SLIDE PLAN

For each slide:

1. Slide title
2. What it explains
3. Visual type
4. Exact slide text
5. Layout notes
6. Inputs needed (if any)

B) GENERATION PROMPTS

For each slide:

Prompt name: [Short name]

Prompt text:

Create a clean 16:9 slide (1920x1080).

Use [FONT FAMILY] as the font.

Use [PRIMARY COLOR] for highlights.

Use [SECONDARY COLOR] and [ACCENT COLOR] sparingly.

Use [BACKGROUND PREFERENCE].

Use dark text for readability.

Place title at top-left: "[TITLE TEXT]"

Create a [VISUAL TYPE] using the following content:

- [ELEMENT 1]

- [ELEMENT 2]

- [ELEMENT 3]

Design rules:

- Keep shapes simple and consistent

- Use rounded rectangles if needed

- Use thin dividers

- Maintain even spacing

- Avoid clutter

- Keep strong visual hierarchy

- Ensure everything is aligned

Text rules:

- Keep all labels short

- No long sentences

- No unnecessary decoration

Make the slide look like it belongs in a top consulting presentation.

Size: 1920x1080

C) CONSISTENCY CHECKLIST

- Titles follow same placement and size

- Same font used across slides

- Same color logic applied

- Equal spacing between elements

- Minimal text on every slide

- No clutter or visual noise

- Clear hierarchy of information

- Each slide communicates one idea instantly

ROLE

You are a senior strategy consultant and visual communication expert. You convert raw text into sharp, e:

OBJECTIVE

Turn the input text into 1 or more high-quality consulting-style slides.

- Slides must be scannable in under 5 seconds

CONSULTING SLIDE PRINCIPLES

- Insight first, design second
- One message per slide
- Strong visual hierarchy
- Minimal text, maximum clarity
- Every element must have a purpose

STEP 02 Extract Brand Identity with Pomelli

Get hex codes, fonts, and brand DNA from any website instantly

Go to labs.google.com/pomelli. Paste the brand website URL into the search bar. Pomelli automatically pulls fonts, color hex codes, and brand tone. Copy those values into the OPTIONAL STYLE INPUTS section of your ChatGPT prompt.

Pomelli homepage — paste any website URL and get the full brand identity in seconds

Apple brand identity extracted by Pomelli — SF Pro fonts, hex color codes, and palette ready to use

Pro Tip Do this once per brand. Save the hex codes somewhere handy so you never have to look them up again.

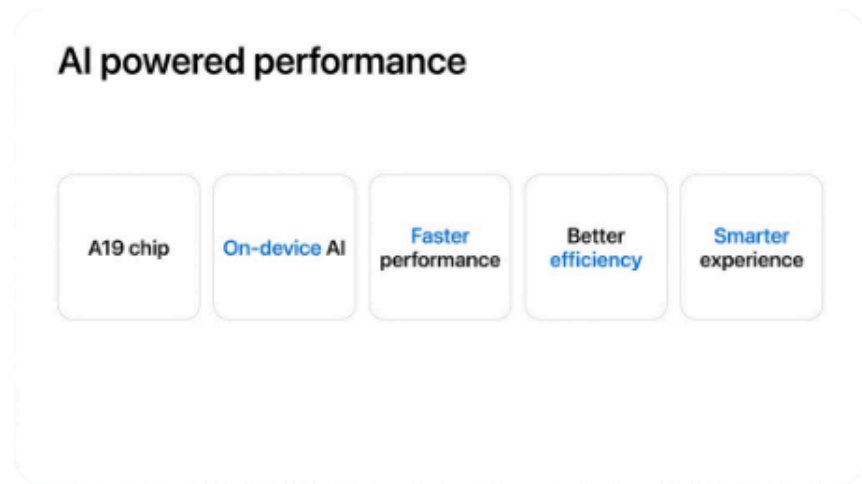

STEP 03 Generate the Slide in Gemini

Paste the Generation Prompt and let Gemini render a visual slide

Open gemini.google.com. Make sure you are on the Pro plan (Jio is giving free offers) and the "Create image" option is active in the input bar. Paste the Generation Prompt that ChatGPT produced. Gemini will render a slide.

Show thinking ▾

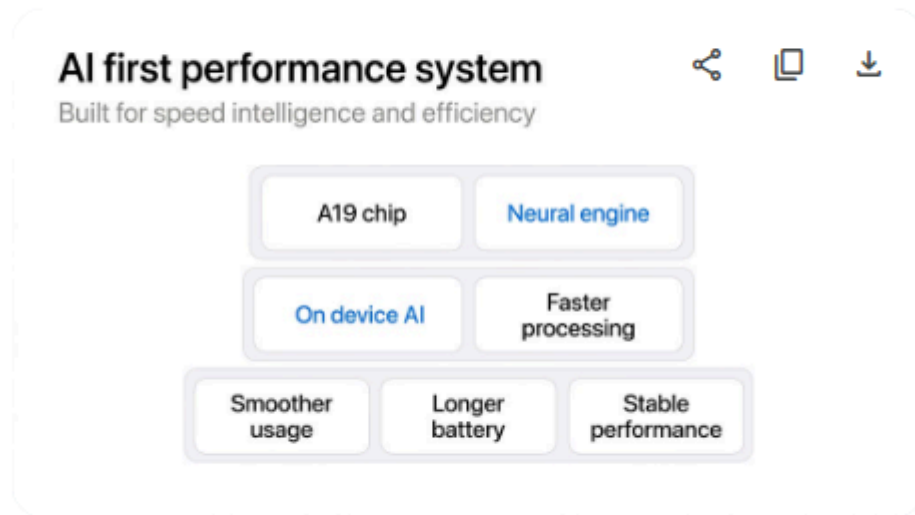

Not happy with the result? Run a feedback loop:

- Download or screenshot the Gemini slide
- Go back to ChatGPT and paste the image
- Verbally describe the changes you want
- Ask it to output a new code block with the updated design code
- Paste that new code back into Gemini

Pro Tip This loop usually takes 1 to 2 rounds. ChatGPT remembers the full slide context so you only need to describe the change — not re-explain the whole slide.

STEP 04 Generate an Apps Script Code

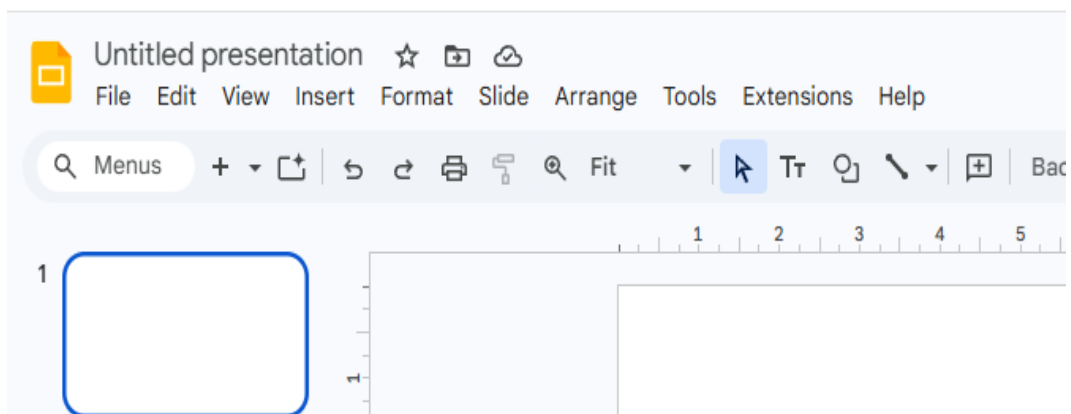

One prompt turns your slide into a real editable Google Slides file

Once you are happy with a Gemini slide, go back to ChatGPT and type this:

ChatGPT generating Apps Script code — styled for Apple brand with Helvetica Neue and blue accent

Now run that code in Google Slides:

- Open a blank Google Slides deck
- Click Extensions in the top menu bar
- Click Apps Script
- Delete any default code that appears
- Paste your full Apps Script code
- Click Run — authorize if prompted

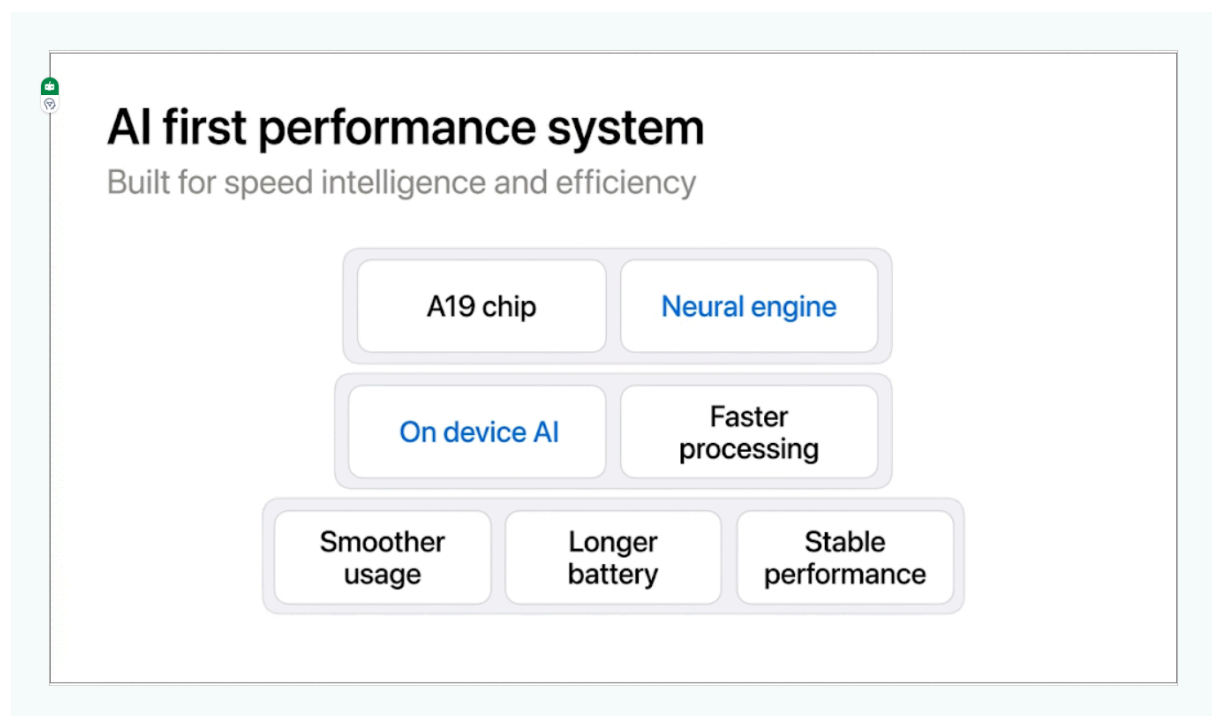

Google Slides: Extensions → Apps Script

Apps Script editor — paste code, click Run, watch your slide get built automatically

If the execution log shows an error:

- Copy the exact error message from the Execution Log panel
- Paste it into Gemini
- It will correct the code instantly
- Paste the fixed code and run it again — usually 1 to 2 rounds

 **Pro Tip** Apps Script generates a new Google Slides file automatically and gives you a direct link. Click it and your slide will be there.

STEP 05 Polish and Export

Your slide is now fully editable inside Google Slides

Your slide is now a proper Google Slides file. Everything is editable — text, shapes, colors, positioning. You can:

- Fix typos or update any text directly on the slide
- Click any shape to change its color or size
- Rearrange or delete elements as needed
- Download as PNG, PDF, or PPTX
- If the slide is already perfect, just copy the image and paste it wherever you need it

Final slide inside Google Slides — fully editable, ready to present or drop into any deck

Pro Tip The whole process takes under 10 minutes. After two or three runs you will be faster than anyone using PowerPoint manually.
